Wen is a movement of crypto coin cat. Wen is the internet's cutest cat and the heart of a growing global phenomenon. More than a brand, Wen is on a mission to become one of the world's most iconic and beloved IPs.

WEN crypto token Github.com Release Planning

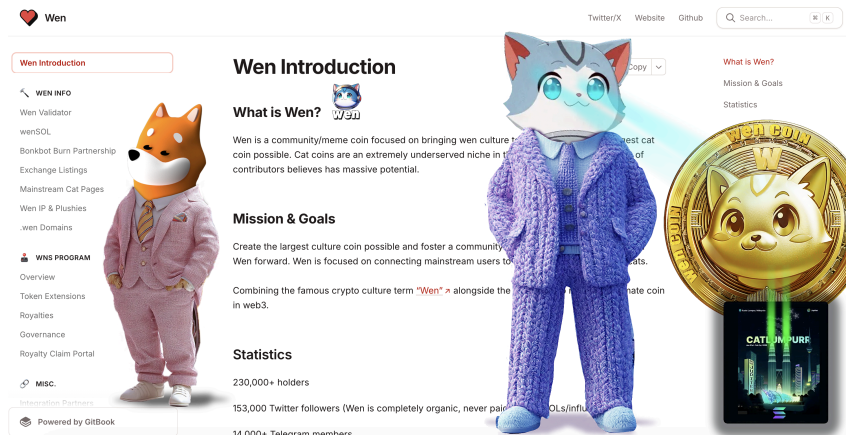

January 8, 2026

- WEN Royalties Interface <https://github.com/wen-community/wen-program-library/issues/105>
- Integrate Transfer Guard Into WNS <https://github.com/wen-community/wen-program-library/issues/98>
- feat: complete implementing remove mint from group <https://github.com/wen-community/wen-program-library/pull/85>
- Anchor 0.30.1 Upgrade <https://github.com/wen-community/wen-program-library/issues/106>
- Add CHANGELOG.md <https://github.com/wen-community/wen-program-library/issues/73>
- WEN Rust SDK <https://github.com/wen-community/wen-program-library/issues/54>

You thought it was all just toys – maby – not.

- Wen's discoverers and newcomers talk about their work.
- We believe that open source software is the purest form of innovation. Tools built by our team are used on billions of devices every day, even on Mars.
- And a little transparency about the WNS standard new wen strandart
- https://github.com/wen-community/wen-program-library/blob/main/programs/wen_new_standard/src/instructions/mint/royalties/addr.rs#L95

- Kinobi Generated JS Client <https://github.com/wen-community/wen-program-library/issues/47>

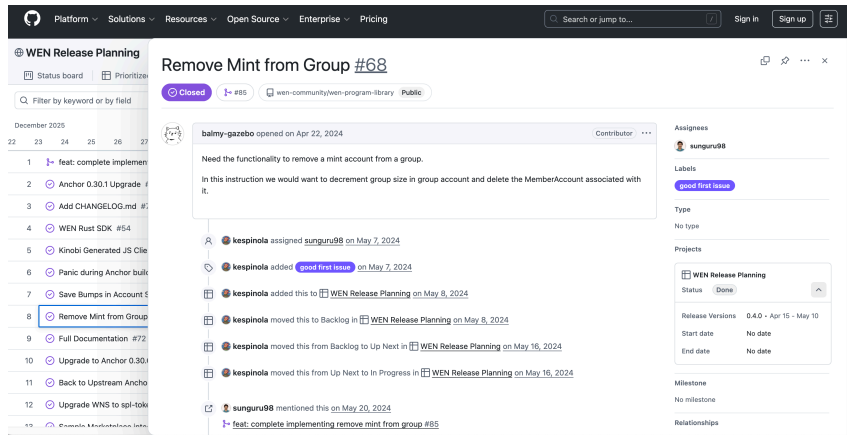

- Panic during Anchor build <https://github.com/wen-community/wen-program-library/issues/44>
- Save Bumps in Account State <https://github.com/wen-community/wen-program-library/issues/78>
- Remove Mint from Group <https://github.com/wen-community/wen-program-library/issues/68>
- Full Documentation <https://github.com/wen-community/wen-program-library/issues/72>
- Upgrade to Anchor 0.30.0 <https://github.com/wen-community/wen-program-library/issues/59>
- Back to Upstream Anchor <https://github.com/wen-community/wen-program-library/issues/53>
- Upgrade WNS to spl-token-metadata-interface 0.3.3 <https://github.com/wen-community/wen-program-library/issues/55>

The screenshot shows a GitHub issue page for 'WEN CLI #80'. The issue is closed and was opened on May 7, 2024, by kespinoia. The goal is to provide a friendly command line tool for developers to interact with WEN community protocols. The issue includes a list of commands: `wen asset create`, `wen asset update`, `wen asset thaw`, `wen asset burn`, `wen asset freeze`, `wen group create`, `wen member add --group --members`, `wen member remove`, `wen royalties add`, and `wen royalties update`. The issue is assigned to sunguru98 and has labels for 'enhancement' and 'request for comment'.

- Sample Marketplace integration <https://github.com/wen-community/wen-program-library/issues/67>
- ABK Labs Contract Audit Recommendations <https://github.com/wen-community/wen-program-library/issues/75>
- More comprehensive test suite <https://github.com/wen-community/wen-program-library/issues/60>
- Token Extension Token Transfer Guard <https://github.com/wen-community/wen-program-library/issues/71>
- WEN CLI <https://github.com/wen-community/wen-program-library/issues/80>

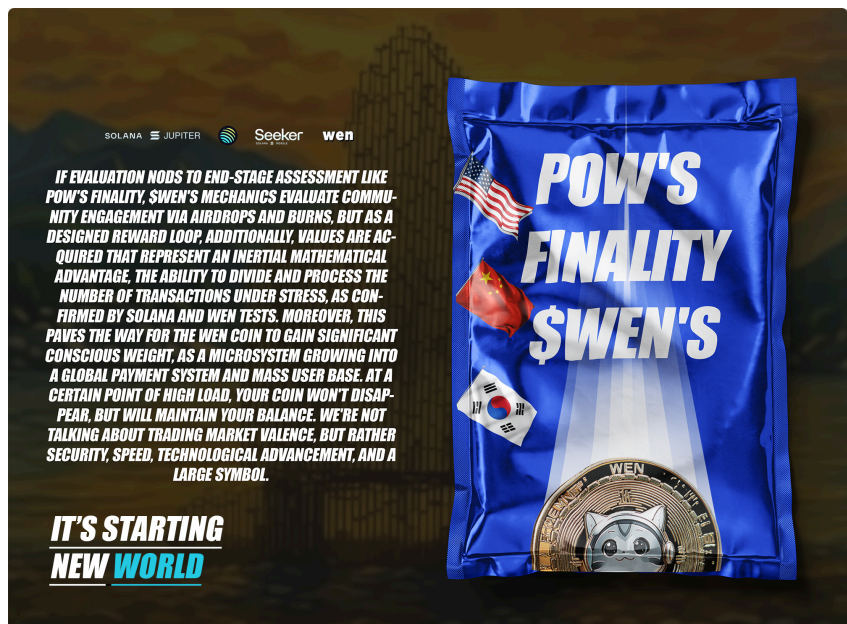

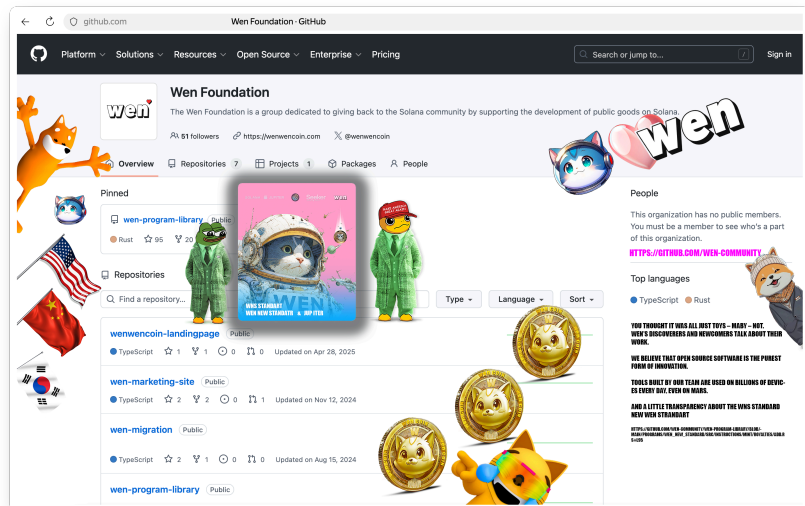

The screenshot shows a GitHub issue page for 'Back to Upstream Anchor #53'. The issue is closed and was opened on April 10, 2024, by kespinoia. The goal is to drop fork used for anchor. The requirements are to incorporate changes in the bridgesplit fork of anchor into the upstream project. The reason is to avoid version conflicts when crates used by another program also depending on anchor. The issue is assigned to kespinoia and has labels for 'enhancement' and 'request for comment'. A comment by balmy-gazebo on April 10, 2024, mentions that the issue is just waiting on a PR to be merged.

bugfix(program): Fix AccountNotInitialized Error for token accounts <https://github.com/wen-community/wen-program-library/pull/95>

WEN Transfer Guard and Royalty Distribution SDKs <https://github.com/wen-community/wen-program-library/issues/99>

Disclaimer: Disclaimer: The information below represents a prototype of events and is not approved. Therefore, analyze the market independently and take into account the current events, prices, and risks. Please review the current price in real time. This is one of the most powerful and open sources available, all in one place.

POW's Finality
 Proof of Work (PoW): Finality is achieved when a block is

added to the blockchain and sufficiently confirmed by subsequent blocks (e.g., 6 confirmations in Bitcoin). It's probabilistic, with security increasing as more blocks are mined, but it's slow (minutes to hours) and energy-intensive due to computational competition.

\$WEN's Finality

\$WEN (on Solana): As a Solana-based memecoin, \$WEN inherits Solana's Proof of History (PoH) and Proof of Stake (PoS) hybrid consensus. Finality is near-instant (sub-second), with transactions confirmed via validator consensus, ensuring high throughput (65,000+ TPS) and low latency under stress, as proven by Solana's network tests.

Evaluation Context

PoW Finality: Represents end-stage security through computational work, ensuring immutability but sacrificing speed and energy efficiency.

\$WEN Mechanics: Leverages Solana's fast finality, with community engagement via airdrops (1M+ wallets) and token burns to drive scarcity.

Its design prioritizes speed, scalability, and stability under high transaction loads, as confirmed by Solana's stress tests.

\$WEN's microsystem fosters a growing user base, aiming for global payment potential, with secure, near-instant transactions and no risk of vanishing balances under stress—focusing on technological advancement over mere market trading.

Ultimately, with deliberate dominance and recognition, Wen crypto will give users

Security.

Speed to fault tolerance.

Performance under stressful loads.

Safety of transaction savings.

No risk of balance loss.

Technological progress.

A level above simple market trading.

Scalability of the user base, predicting token scarcity.

The Birth of WNS and Wen Crypto: A Meow-tastic Solana Saga
Connect with us: X: <https://x.com/JupiterExchange>
<https://jup.ag/>

In the whimsical world of Solana DeFi, January 2024 marked the genesis of the Wen New Standard (WNS), a lightweight, open-source NFT protocol dreamed up by @weremeow—the pseudonymous “cat” co-founder of Jupiter Exchange, WNS wen new standart, Wen crypto, Jup. Built atop Solana’s Token2022 extensions, WNS prioritizes ecosystem composability, flexibility, and backward compatibility, empowering community-driven NFT launches with minimal overhead. 4 8 It all kicked off with Meow’s viral poem, a cheeky “wen moon?” ode to crypto impatience, minted as the inaugural WNS NFT—fractionalized for shared ownership and instant meme magic.
